

# Carbon-Fiber Reinforced Thermo-Plastic CFRTP Prepreg

This is a sheet material with multiple lines of carbon fiber placed in parallel or a textile reinforced fiber material impregnated with thermoplastic epoxy resin that includes a curative agent, which they classified unidirectional prepreg (UD prepreg) and the textile prepreg respectively.

Type	Textile prepreg, UD prepreg
Standard length	5m~
Standard width	520mm
Storage life	● -15° C or less: 6 months ● -5° C or less: 3 months ● 5° C or less: 2 weeks *Period that can maintain tackiness in room temperature. Heat molding is possible even when tackiness has decreased.
Product transportation	Refrigerated transportation is used in principle. However, normal truck transportation with dry-ice packaging is used when the width is over 520 mm. Contact us for details of transportation methods. ※Under consideration
